Cultural context

Interior design as multi dimensional discipline able to deal with the phenomena of contemporary society, through contamination with Humanities, by comparing and profitable application of experimental methods.

It is the act of conceptual and practical design of **containers of relations**. A creative act not only able to answer to functional needs, but also to **social and relational needs** in which also the sensory and soft qualities of the environments become an **immersive experience**.

Social perview

The project as “arte-fatto” responds to people’s sociological, intellectual and even political dimensions. In fact, **designers invite people to behave in a certain way.**

Living experiences, users could affect a full recognition, satisfy new curiosity, be surprised or amused, arouse positive emotions; or, on the other hand, could live a more or less conscious **sense of frustration and devaluation** (Vash & Crewe, 2004), especially in people that have to face physiological or pathological situations.

...objects have their own life, [...], in the sense that they reinforce social practices exactly as social practices strengthen them.

Molotch, 2005

Design is the conscious effort to impose a meaningful order.

Papaneck, 1971

This means engaging designers in new ways of thinking and developing more universally designed environments usable to the greatest extent possible by all people without the need for adaptation or specialized design.

Mace, 1997

Good design enables, bad design disables.

EIDD, 2004

Research goals

The aim of the research is to support the switch from integration to social inclusion in designing touristic accommodations.

The main goal is to provide a range of tools to do so, through design driven planning of interiors, services and products.

Designing hotel for all

Theoretical framework

Universal Design

R. Mace 1997

- Equitable use
- Flexibility in use
- Simple and intuitive use
- Perceptible Information
- Tolerance for error
- Low physical effort
- Size and space for approach and use

Wider User base Design

G. Arduini 1991

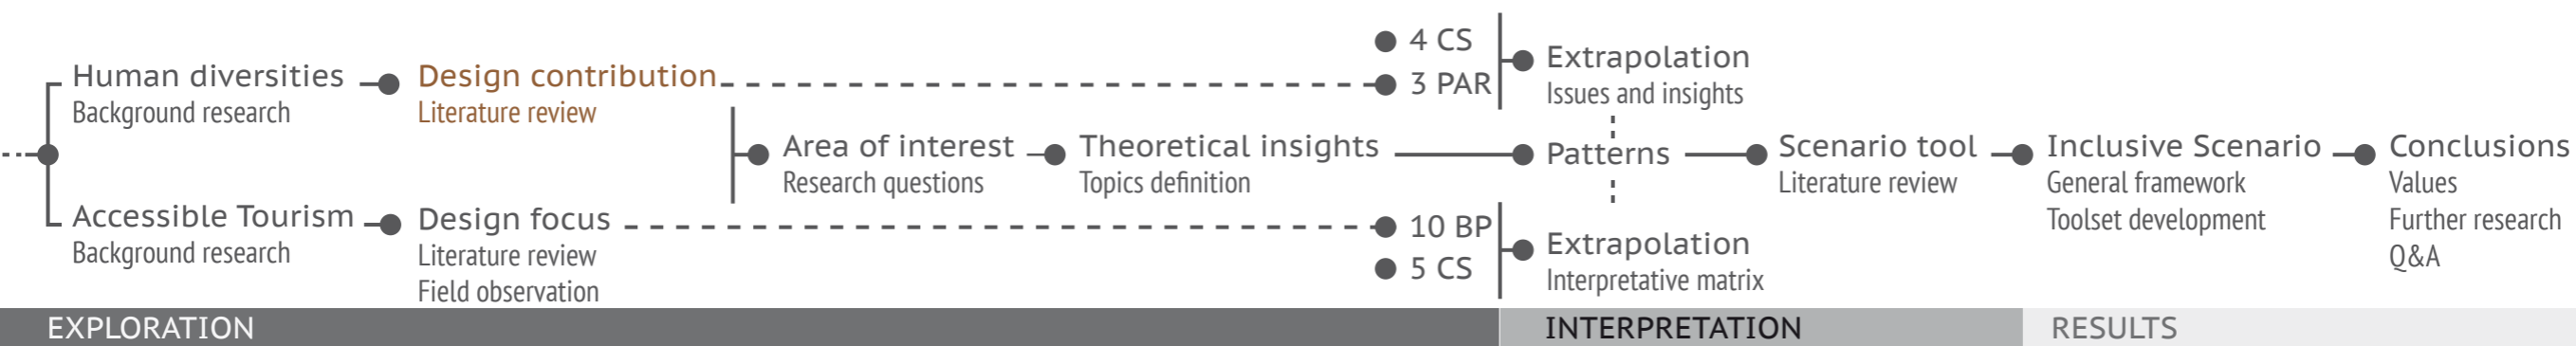

- Autonomy of use
- Compatibility
- Adaptability and flexibility
- Normal image
- Ease of use
- Good quality / price ratio
- Safety and reliability

Design for All

Stockholm 2004

Design for All is design for human diversity, social inclusion and equality. Design for All aims to enable all people to have equal opportunities to participate in every aspect of society. To achieve this, the built environment, everyday objects, services, culture and information, everything that is designed and made by people to be used by people must be accessible, convenient for everyone in society to use and responsive to evolving human diversity.

Designing hotel for all

Accessible Tourism framework

Context Introduction

The accessible tourism market is growing, thereby sparking a need for more research from a demand focus.

Designing hotel for all

Accessibility in Hospitality sector

#access issues
#accessibility

#dignity
#equity

Accessible tourism sector is the wider frame where the entire destination has to be accessible.

Israeli, 2002

Availability of adequate accommodation for the overnight of PwD is the fundamental condition to embark in a journey.

Darcy, 2002

If PwD cannot find suitable accommodation that meet their access needs, by necessity, they change their destination choice or do not travel.

Darcy, 2010

Designing hotel for all

Accessibility in Hospitality sector

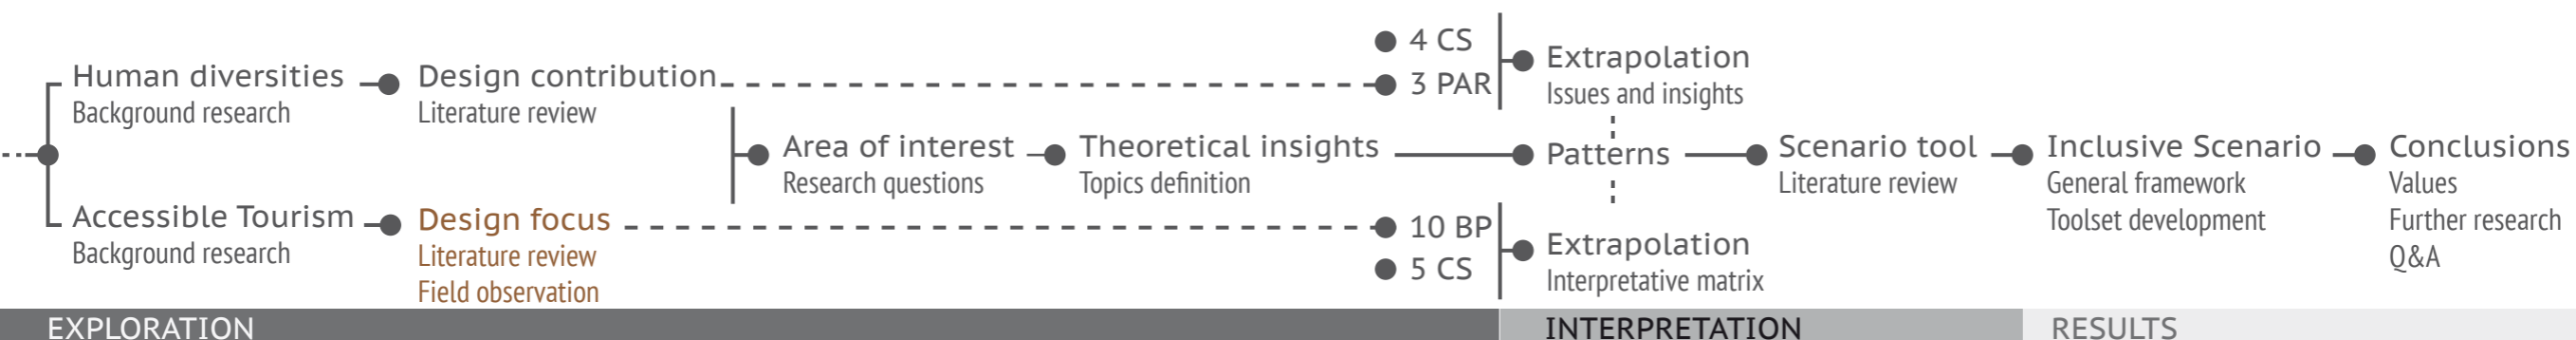

#cultural issues

#discriminant

It has been noted that tourism experiences for PwD are more than access issues.

Yau, McKercher and Packer, 2004
Shelton and Tucker, 2005
Stumbo and Pegg, 2005

Designing hotel for all

Accessibility in Hospitality sector

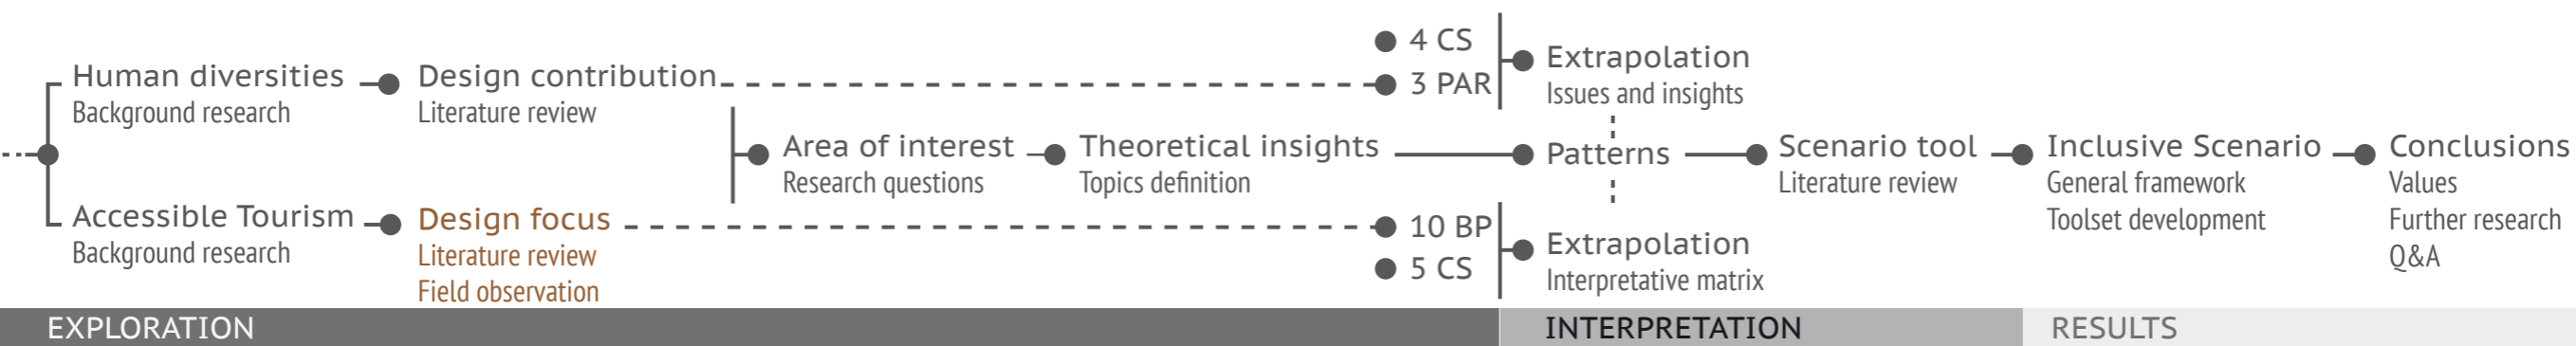

Disabled travellers did not regard themselves as “regular folks”.

Instead, they recognize that they differ from the mainstream population.

They do, however, expect a “regular folks” **experience**.

Ray and Ryder, 2000

Designing hotel for all

from integration to inclusion

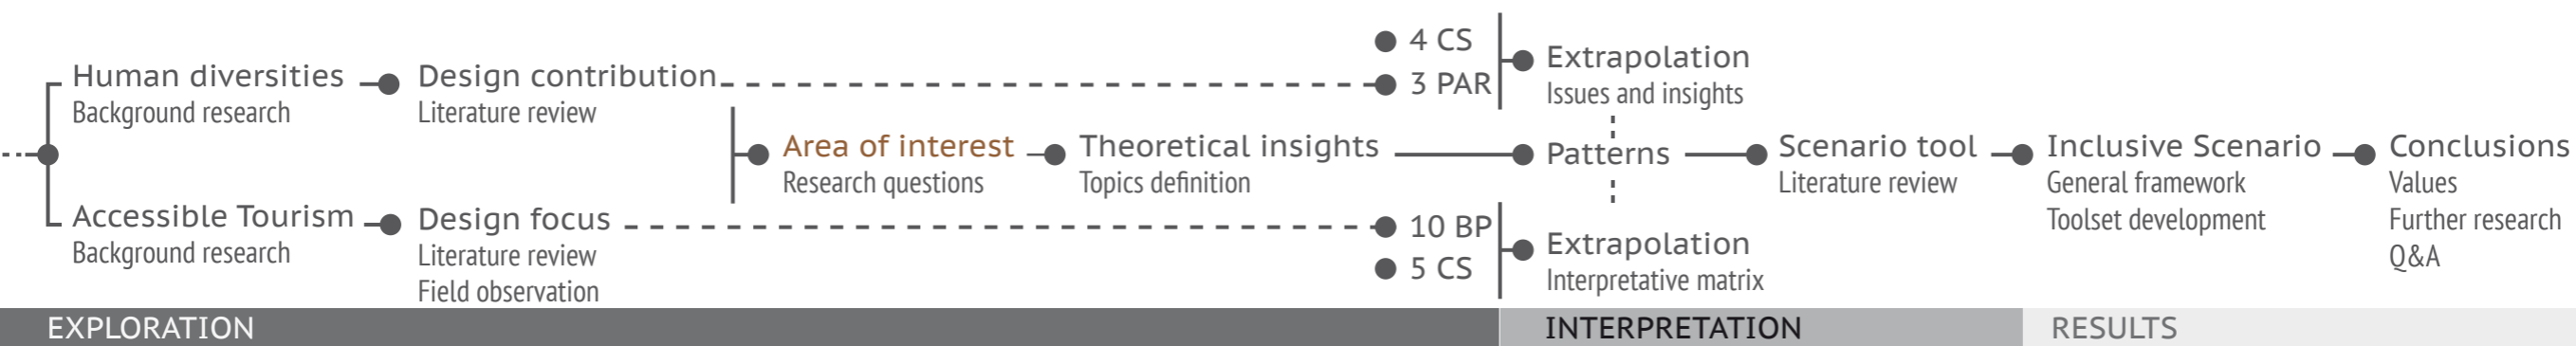

...It is an ideal path not to meet the technical standards on accessibility, but rather to respond to needs and desires associated with an effective, safe, enjoyable, satisfying and independent use of environments.

The aim of ensuring accessibility and usability has to be faced with appropriate solutions incorporated in the design process, regardless of regulatory requirements. It is not about adapting accessibility features required by rules, but it has to create environments starting from the more "fragile" human condition.

It recognizes the importance of how the solution appears, in its expressive value, its communicability.

Monzeglio, 2010

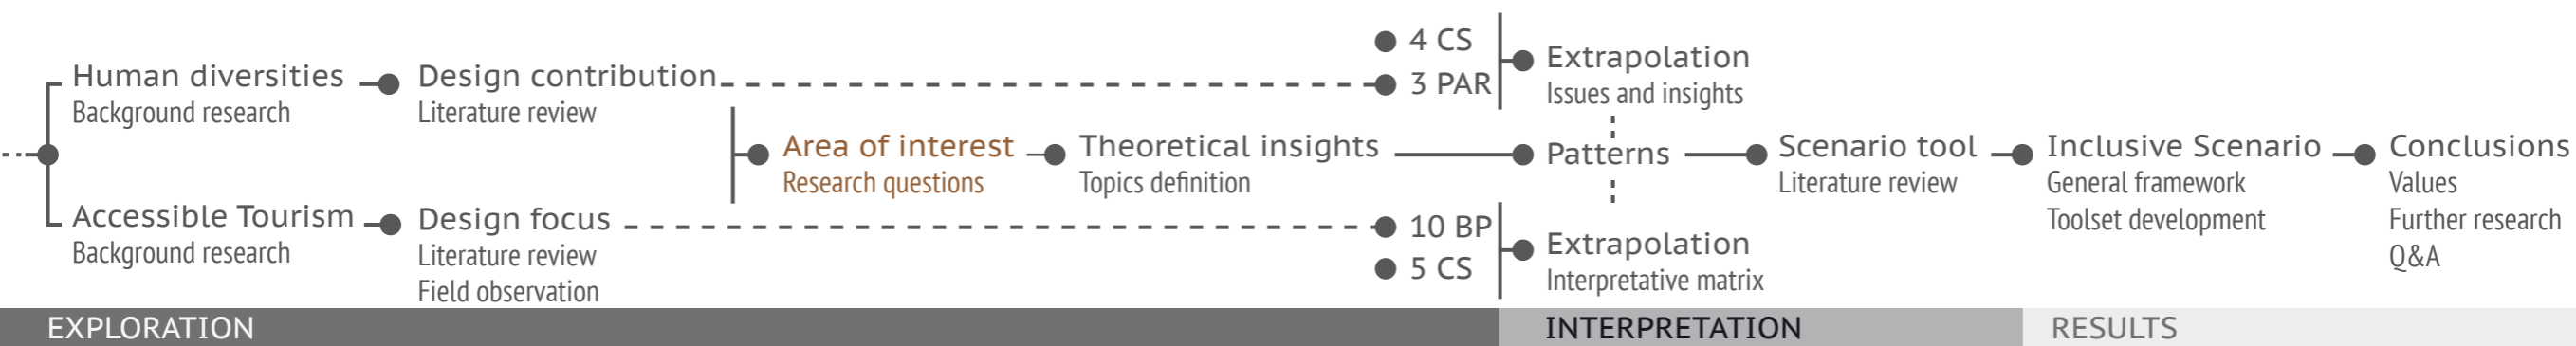

Research questions

How to overcome the regulatory approach?

How to develop a **systemic - holistic- approach** to **inclusive interior** design?

Are there design tools to develop **universal experiences**?

Research questions

#experience

Pine and Gilmore, 1998
Sundbo and Soresen, 2013
Fabris, 2009

Economic Offering	Commodities	Goods	Services	Experiences
Economy	Agrarian	Industrial	Service	Experience
Economic function	Extract	Make	Deliver	Stage
Offering's nature	Fungible	Tangible	Intangible	Memorable
Key attribute	Natural	Standardised	Customized	Personal
Supply method	Stored in bulk	Inventaried after production	Delivered on demand	Revealed on duration
Seller	Trader	Manufacturer	Provider	Stager
Buyer	Market	User	Client	Guest
Demand's factor	Characteristics	Features	Benefits	Sensations

Needs, such as inductors prior to consumption are rapidly giving the way to desires and these are combined with experience research.

Theoretical framework

Carroll, 2000, 2002, 2004
 Maschi, 2000
 Manzini and Jegou, 2001

Scenario-based design changes the focus of design work from defining system operations to describing how people will use a system to accomplish work tasks and other activities.

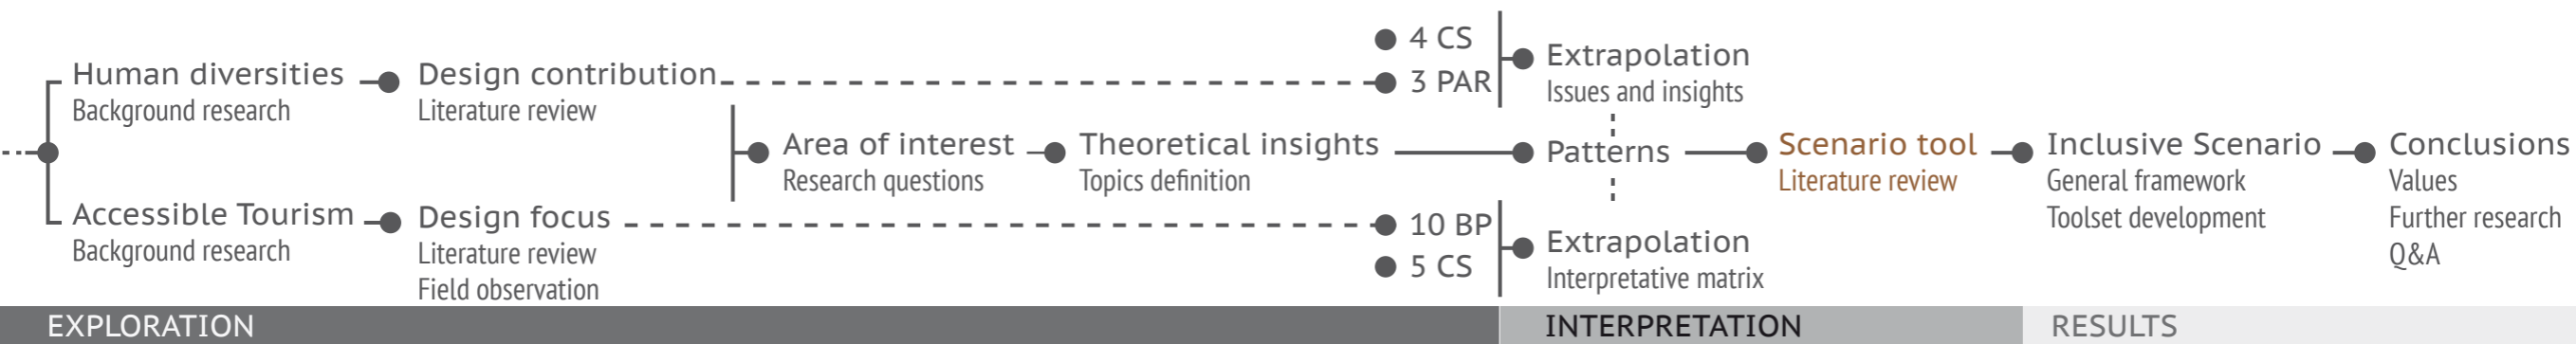

Carroll, 2002

Scenarios anchor design discussion in the work to be supported, encouraging input and participation among all stakeholders. They serve as advance organizers to functional specifications.

Carroll, 2002

By vividly representing work activity, scenarios can help designers stay focused on end-user's activity and experience, and avoid confusing their preferences within those of the users.

Designing hotel for all

Originality and values

Provide design tools that come from other Design area or disciplines.

Could be used in other fields and not only for PwD

Flexibility of use:
possibility to be used in its entirety or to use fewer tools, and in more or less extended way;

The Inclusive Scenario:

- . changes the starting point of accessibility design.
- . Wishes, wants and needs of PwD are in preliminary phases of design process, stating that human diversity is not an exception.
- . are not used categories of PwD but user contextualised profiles.
- . it is the mirror of the cognitive process that guests experience, and it is not only brought the access issue.
